

CÚRAM SOFTWARE LAUNCHES SOCIAL ENTERPRISE COLLABORATION SOLUTION

Innovative Solution Enables Best Practice, Multi-Disciplinary Approach to Improve Outcomes for Children and Families

Herndon, Va. – August 25, 2008 – Cúram Software, the leading provider of Social Enterprise Management (SEM) software solutions, today announced the release of Cúram Social Enterprise Collaboration™ (SEC), designed to facilitate and promote better communication and coordination between multi-disciplinary human and social services teams working to achieve positive outcomes for clients. Designed specifically to support the unique business processes of social enterprises, SEC enables agencies to improve communication among groups, securely integrate client information, and deliver comprehensive, timely benefits and services to citizens in need.

Recent studies confirm that families that receive one benefit or service are likely to be involved in other programs, as well. For example, reports indicate as many as 2 out of 3 cash assistance recipients also receive services from other child and family programs. But in the field, this is often not known resulting in information being stored in disparate systems and not readily available to case workers in a timely fashion. Many times it is only after an incident that they can connect the dots and see the full picture. It is more apparent than ever that the barriers between organizations and information system silos must be removed to ensure that case workers have all of the information available to them. Moreover, it is imperative that all of the case workers, service providers, and stakeholders work together to ensure positive, sustainable outcomes.

Successful outcomes for citizens and families – ranging from self-sufficiency to family reunification to return to work – are best achieved through a multi-disciplinary approach that involves all stakeholders in the social enterprise management ecosystem working

together seamlessly. In order for a multi-disciplinary team (MDT) to be effective, client and case information must be easily accessible and shareable in a secure, common location and MDT activities must be centrally coordinated and communicated. Cúram Social Enterprise Collaboration promotes communication and coordination through a configurable, role-based portal enabling agency workers, service providers and CBO's to collaborate in support of citizens and their families. This portal provides a common platform for capturing and sharing information, case conferences and reviews, minutes from MDT meetings, and incidents affecting citizens and their families.

Cúram Social Enterprise Collaboration is designed to integrate and index content from underlying systems so that all members of the team can easily visualize client details, goals, desired outcomes, relationships, and any other cases associated with the client or family. SEC improves not only the flow of information and ideas among agencies and service providers, but also provides the necessary family context surrounding all aspects of the case and related cases. As a result, clients and their families receive all of the necessary benefits and services in a timely fashion with a clear vision of achieving sustainable outcomes. The increased collaboration and data sharing also eliminates redundant service delivery and reduces fraud and abuse.

“With Cúram Social Enterprise Collaboration, data sharing tools give way to a new fully enabled multi-disciplinary approach. This approach extends collaboration beyond traditional boundaries and provides a full solution for enhanced communication, seamless coordination of benefits and services, viewing content from internal and external sources, and providing a contextual view of the clients,” said Ronan Rooney, founder and chief technology officer, Cúram Software. “Cúram Social Enterprise Collaboration is a valuable asset to agencies working to improve decision making through information sharing, increased responsiveness, better resource allocation and planning, as well as faster, more seamless collaboration among members of multi-disciplinary teams.”

About Cúram Software:

Cúram Software is the leading provider of Social Enterprise Management (SEM) software solutions, delivering best-in-class applications for social enterprises globally including, health and human services, workforce services, and social security organizations. Using the Cúram Business Application Suite™ agencies can immediately reap the benefits of client-centric business processes and an outcomes-driven integrated
